

Experienced

Junior Engineer Incoming Quality-IND

Gujarat, India

Professional Profile – Junior Engineer (Incoming Quality Control)

Motivated and detail-oriented Junior Engineer specialising in **Incoming Quality Control (IQC)** within the automobile industry. Experienced in inspecting and verifying incoming materials, coordinating with suppliers for quality compliance, and ensuring adherence to quality standards and specifications. Possesses a strong understanding of basic quality tools, documentation, and process audits. Committed to supporting production efficiency by identifying non-conformities early and contributing to continuous improvement initiatives in the quality assurance process.

What you'll do

- **Professional Profile – Junior Engineer (Incoming Quality Control)**
- As a Junior Engineer in Incoming Quality Control within the automobile industry, you are responsible for supporting the quality assurance of incoming materials and components. I ensure that all parts received from suppliers meet required specifications and standards before being introduced into the production process. With a focus on accuracy, documentation, and adherence to quality procedures, I collaborate with quality and production teams to maintain product integrity and prevent line rejections. I am committed to learning, process discipline, and contributing to the overall quality performance of the organisation.
- **Task Description – Junior Engineer (Incoming Quality Control)**
 -
 - Inspect and verify incoming parts and raw materials against drawings, standards, and specifications.
 -
 -
 - Record and maintain quality inspection reports, material certificates, and other required documentation.
 -
 -
 - Coordinate with suppliers for material non-conformities and support root cause analysis and corrective actions.
 -
 -
 - Ensure compliance with IQC procedures, quality standards (such as ISO/TS), and company guidelines.
 -
 -
 - Assist in periodic audits of suppliers and internal processes.
 -
 -
 - Communicate with cross-functional teams including procurement, production, and R&D to resolve quality-related issues.

What we are looking for

- **Profile Description – Junior Engineer (Incoming Quality Control)**
- A dedicated and quality-focused Junior Engineer specializing in **Incoming Quality Control (IQC)** within the automotive manufacturing sector. Possesses a strong foundation in material inspection, quality documentation, and supplier coordination. Skilled in identifying non-conforming parts, ensuring adherence to quality standards, and maintaining inspection records. Demonstrates a proactive approach in supporting quality systems, implementing basic quality tools, and contributing to continuous improvement initiatives. Works effectively with cross-functional teams to maintain product integrity and prevent quality issues in early stages. Eager to grow within a quality-driven environment and committed to upholding high standards in every aspect of material inspection and reporting.
